

How to Create a New Page in WordPress

Follow these steps to add a new page to your WordPress website:

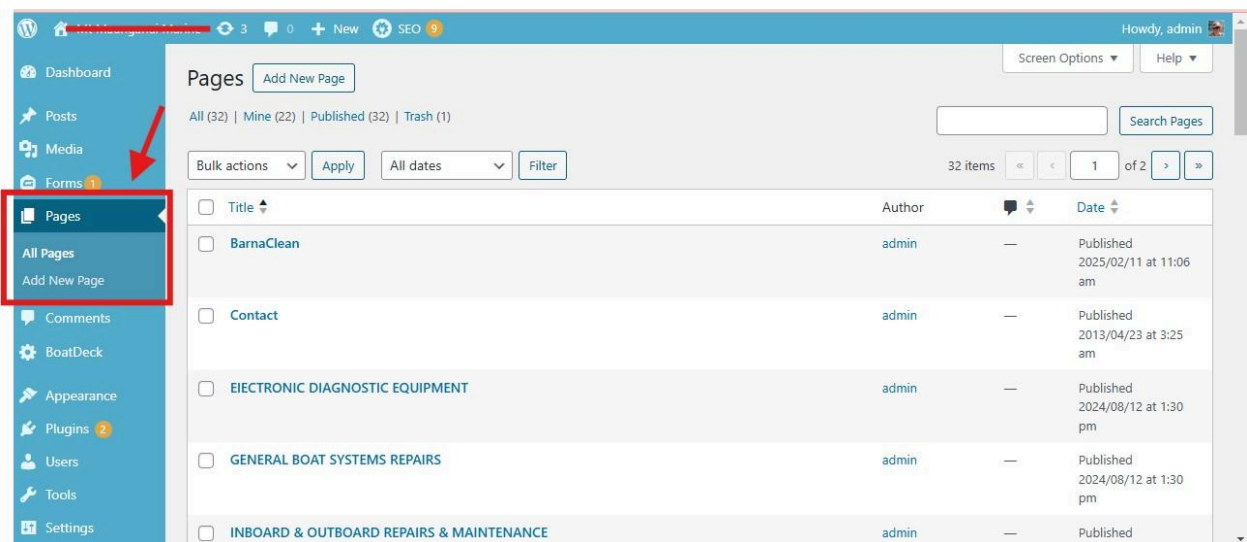

1. Visit Your Website's Dashboard

Log in to your WordPress website and navigate to the dashboard, where you can manage all aspects of your website.

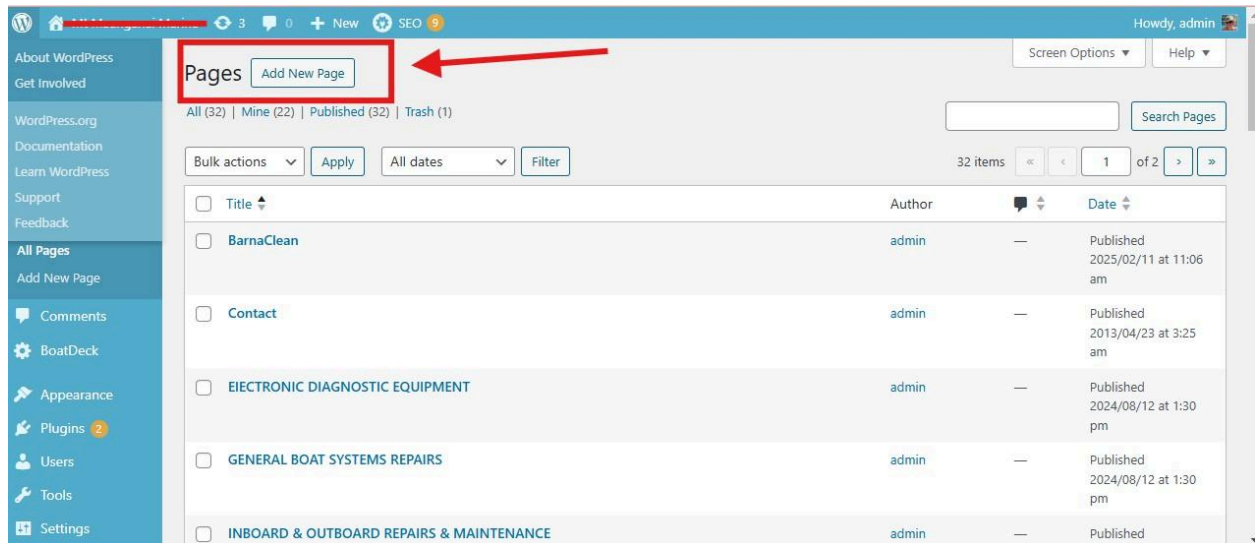

2. Click on "Pages" on the Left Side

In the left-hand menu of your dashboard, click on the "Pages" option to view and manage all of your existing pages.

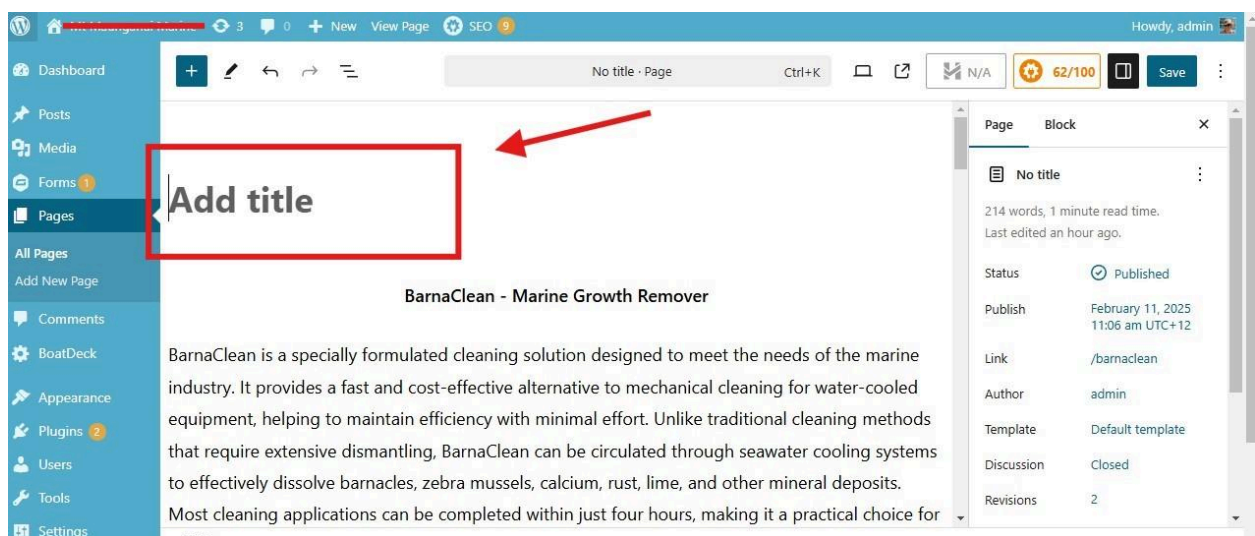

3. Click on the "Add New" Button

At the top of the Pages screen, click the "Add New" button to begin creating a new page.

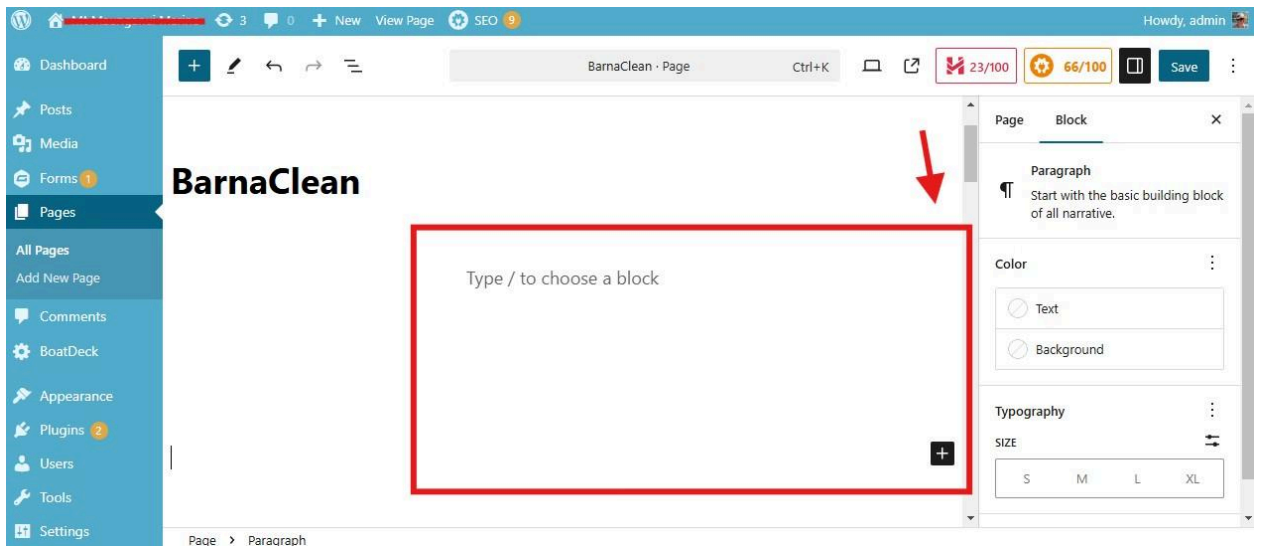

4. Give Your Page a Title

In the box at the top of the screen that says "Add title," type the title of your new page. This will be the name that appears in the navigation menu or on the page itself.

5. Add Content to Your Page

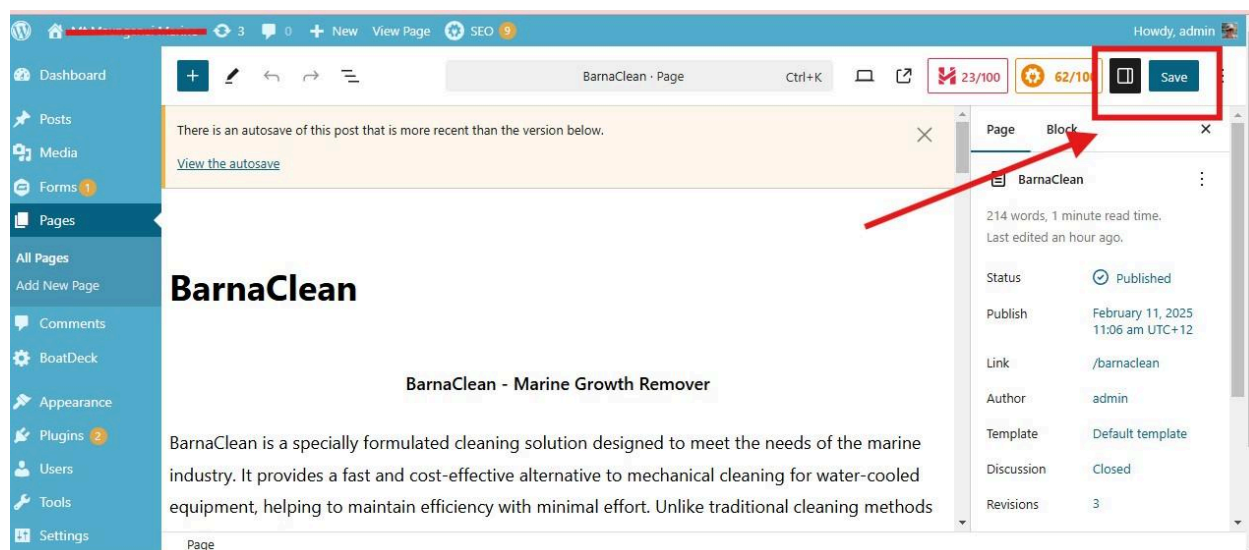

- To add new content, click on the **+ Block Inserter** icon, which will allow you to insert different types of content blocks, such as text, images (images should be 1850 width and whatever height you have on the image), videos, and more.
- If you'd like to edit existing content, simply click on the block you want to modify.

6. Save or Publish Your Page

Once you've added all the content you want to your page or post, you have the option to either save it as a draft or publish/save it:

- **Save Draft:** Clicking the “Save Draft” link will save your page or post without making it public. This is useful if you need more time to add content or if you're not ready to publish yet.
- **Publish or Save:** When you're ready to make your page live, click the “Publish” or “Save” button to make it accessible to visitors on your website.
